Genie Key Panels are 'matrix-free' IP networking intercom system designed to be used in connection with Genie, a converged system of IP intercoms and Wireless Beltpacks, or independently without a Genie Base Station which is flexible and efficient in configuring a system for various applications. The Key Panels offer varied audio paths such as peer-to-peer or up to 20 multiple Key Panels group communications with one key(group key), Genie group conference, Line connections, Line audio routings and IFBs. It is highly scalable system enabling up to 128 Key Panel connections that supports high standard intercom users to accomplish complex workflows for large scale of facilities or events. The system can easily be configured by GCM(Genie Configuration Manager) with full visibility of the connection status. GRP32 is a 2RU size Key Panel that provides 32 Talk keys for 32 Talk channels. The power is redundant by PoE or two 12VDC PSUs.
